GRADUATE**PERSONAL/EMPLOYMENT****QUOTATION**

Ciaran Curtin

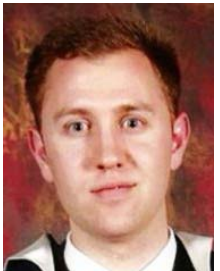

Undergraduate Degree
European Law and Spanish

Company
CPL, Dublin

I did the enterprise solutions development course, it was excellent as it gave me an interesting outlook at ERP systems and their implementation within big corporations. The introduction to SAP ERP system and the other SAP products such as Predictive Analysis and SAP HANA. Doing well on the course enabled me to get a job with the Kerry Group within their SAP ERP implantation project, the KerryConnect Programme. This well paid internship gave me a fantastic insight into how the existing business processes were analysed, and how this analysis would help develop solutions for the SAP ERP implementation.

Jarlath Hoade

Undergraduate Degree
Business

Company
Hewlett Packard, Galway

The Enterprise Solutions Development course offers participants a practical education in enterprise software and project management. The course provided me with a distinct advantage over other candidates in my job search. Following the course, I undertook an ICT internship with Kerry Group and I am now working as an SAP Analyst with Hewlett Packard

Joe McNamara

Undergraduate Degree
Media & Communications, and
Geography

Company
G4 Secure Solutions

"I found the ESD course to be extremely beneficial as it gave me a solid grounding in some of the disciplines in which I had sought a formal certification, to which I have since advanced. In addition I gained hands-on experience in project management, more specifically using the Agile toolkit and methodology."
